

CBP WANTED TO QUESTION AND SEARCH PETER DASZAK IN 2021. FBI BLOCKED IT.

In February 2021, officials at the U.S. Customs and Border Protection (CBP) National Targeting Center prepared to question and search Peter Daszak of EcoHealth Alliance upon arrival at JFK airport from China after participating in the World Health Organization's (WHO) investigation into the origins of COVID-19. The referral cited Daszak's longstanding collaboration with the Wuhan Institute of Virology (WIV), his extensive federal grants and contracts, and the assessment that **"much of the funding DASZAK receives is put towards gain of function research."** Officials planned to question Daszak about the WHO mission, his communications with WIV personnel, his prior travel, and whether he transported biological samples from China. According to the documents, the interview and inspection did not occur due to a request from the Federal Bureau of Investigation (FBI) that CBP not stop Daszak.

WHAT THE DOCUMENTS SHOW

01 | WHY DASZAK WAS TARGETED

Officials cited Daszak's relationship with WIV, his federal grants and contracts, and his role in directing National Institutes of Health (NIH) funding connected to research conducted with Wuhan scientists. The targeting package stated that **"much of the funding DASZAK receives is put towards gain of function research."**

02 | HOW U.S. TAXPAYER FUNDS REACHED WUHAN RESEARCH

The records identify NIH grant R01AI110964, Daszak's role as principal investigator, and scientific publications involving Zhengli Shi, WIV, and bat coronaviruses. Officials also questioned why Daszak had been selected for the WHO team despite his longstanding relationship with Wuhan researchers and his organization's financial support for their work.

03 | WHAT OFFICIALS PLANNED TO ASK

Officials sought to determine whether the WHO team visited WIV, which areas it inspected, whom Daszak met, and whether he remained in contact with WIV personnel. The targeting package also asked whether Daszak collected biological samples during the trip, carried samples into the United States, or mailed samples from China.

04 | THE INSPECTION ADVANCED TO A FORMAL TARGETING ACTION, BUT THE FBI INTERVENED

CBP created a formal targeting event and prepared a Tactical Terrorism Response Team examination for Daszak's February 5, 2021, arrival at John F. Kennedy International Airport.

"FBI requested not to stop subject. No further NTC action."

Subject: [REDACTED] Referral Event [REDACTED]: P. DASZAK [REDACTED] - DISREGARD

ALCON:

Please disregard request for inspection. Subject will be sent to the [REDACTED] for any requests.

Good afternoon,

Please consider the following subject for a TTRT Exam.

Peter DASZAK (DOB: [REDACTED], [REDACTED]) is scheduled to travel from DOH to JFK on 02/05/2021, aboard QR #701 ETA 1425 EST— Event [REDACTED] has been created for additional information.

*** Reference event for notable publications and news articles.***

Background

Peter DASZAK (DOB: 11/18/1965, [REDACTED]) is the President of EcoHealth Alliance; a US science-based non-profit that conducts research and outreach on the causes of emerging pandemic diseases, and their links to environmental change and conservation ([Link](#)). DASZAK's scientific research is focused on understanding the drivers of emerging diseases to include: evidence that emerging disease, chytridiomycosis, causes global amphibian declines; the first ever map of emerging disease 'hotspots'; and the identification of bats as a reservoir for SARS. DASZAK's goals are to understand what drives disease emergence develop innovative ways to stop emerging diseases in wildlife, livestock and people; and promote conservation of wildlife.

DASZAK, is part of the World Health Organization (WHO) team that is investigating the origins of SARS-CoV-2, the virus that causes COVID-19 ([Link](#)). DASZAK is also affiliated with Zhengli SHI (Bat Woman) - the lead Virologist and Researcher at the Wuhan Institute of Virology (WIV), Chinese Academy of Sciences (CAS) [Link](#). SHI's areas of study include: Bats, Viral Ecology, Viral Entry, Virus Discovery, Zoonotic Diseases, Virology, Ecology of Pathogens ([Link](#)). EcoHealth Alliance and DASZAK have been working with Shi Zhengli for more than 15 years.

DASZAK is listed as the Principal Investigator (PI) on National Institute of Health (NIH) National Institute of Allergy and Infectious Diseases (NIAID) grants: 1U01AI151797-01 – *Understanding Risk of Zoonotic Viruses Emergence in EID Hotspots of Southeast Asia*, and #2R01AI110964-06: *Understanding the Risk of Bat Coronavirus Emergence*, dated 6/01/2014-06/30/2024. SHI listed grant R01AI110964 on her resume ([Link](#)), although SHI is not listed as a PI. A search of the grant revealed 19 publications ([Link](#)), many of which were written by SHI.

Additional information

- DASZAK was asked publicly by NIH to retrieve the original type-specimen used by WIV for genetic analysis, and return it to the United States. He was also asked to explain several aspects of their collaboration, including related to cell phone data. [Link](#)
- DASZAK and EcoHealth has been awarded a number of contracts and grants from the U.S. federal government. These include contracts with the DHS Chemical and Biological Threat Division. Many items that EcoHealth studies are likely to be subject to serious non-disclosure agreements with the U.S. government and/or be export controlled.
- Much of the funding DASZAK receives is put towards *gain of function research*. This research involves experimentation that aims or is expected to increase the transmissibility and/or virulence of pathogens. The ultimate objective of such research is to better inform public health and preparedness efforts and/or development of medical countermeasures. [Link](#)
- In 2013, DASZAK was a coauthor of publication "Isolation and characterization of a bat SARS-like coronavirus that uses the ACE2 receptor" with Zhengli SHI and Ralph BARIC. This paper is of significance due to the first reporting of a SL-CoV-WIV1 (SARS-like coronavirus WIV1) binding to human cells and infecting them. [Link](#)
- A follow up article published in Nature magazine on 12/12/2015 titled "Engineered bat virus stirs debate over risky research, Lab-made coronavirus related to SARS can infect human cells" debates "whether engineering lab variants of viruses with possible pandemic potential is worth the risks." [Link](#)

NTC Requests

- TTRT exam to include review of media (search level determined by POE).
- Why was DASZAK chosen to be on the WHO investigative team?
- Where in China did DASZAK go?
- Where did DASZAK stay while in China?
- Who was the POC?
- Did the team visit WIV? If so, what areas did they inspect? Who did the team meet with?
- Did the team visit the Chinese Center for Disease Control and Prevention? If so, what areas did they inspect? Who did the team meet with?
- Did the team meet with any other officials from the Chinese government?
- Did DASZAK collect any biological samples during the trip?
- Is DASZAK traveling with any biological samples?
- Did he mail any samples back to the US?
- Did he take any materials with him to China?
- Has DASZAK maintained contact with anyone at the WIV? If so, whom and how often would he communicate? What do they communicate about?
- What was the purpose of DASZAK's travel from 01/04/2021-01/07/2021?

Respectfully,

Activity Remarks

Re
m
ar
k
Ty
pe Remark

RE * DASZAK was asked publicly by NIH to retrieve the original type-specimen used by WIV for
MA genetic analysis, and return it to the United States. He was also asked to explain several
RK aspects of their collaboration, including related to cell phone data. DASZAK called the
requirements "outrageous" and does not appear to intend to comply with them
(<https://www.sciencemag.org/news/2020/08/nih-imposes-outrageous-conditions-resuming-coronavirus-grant-targeted-trump>)

* DASZAK and EcoHealth has been awarded a number of contracts and grants from the U.S.
federal government. These include contracts with the DHS Chemical and Biological Threat
Division. Many items that EcoHealth studies are likely to be subject to serious non-disclosure
agreements with the U.S. government and/or be export controlled.

More background information in the kind of research that DASZAK is heavily involved in. A lot of
the funding DASZAK receives is put towards "gain of function research" also known as biological
weapons research. This research involves experimentation that aims or is expected to increase
the transmissibility and/or virulence of pathogens. Such research, when conducted by responsible
scientists, usually aims to improve understanding of disease causing agents, their interaction
with human hosts, and/or their potential to cause pandemics. The ultimate objective of such
research is to better inform public health and preparedness efforts and/or development of medical
countermeasures. <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4996883/> In gain of function
research, genome sequences are reconstructed/reformulated and are inserted into human/animal
cells to be studied on how the "new" sequence effects humans and/or animals. There is a lot of
criticism on gain of function research in regards to ethics and if the science is worth the risks
of creating a potentially harmful virus or disease.

In 2013, DASZAK was a coauthor of publication "Isolation and characterization of a bat SARS-like
coronavirus that uses the ACE2 receptor" with Zhengli SHI and Ralph BARIC. This paper is of
significance due to the first reporting of a SL-CoV-WIV1 (SARS-like coronavirus WIV1) binding to
human cells and infecting them. <https://www.nature.com/articles/nature12711#Sec2> Essentially,
DASZAK and collaborators at WIV created a bat coronavirus capable of directly infecting humans.

A follow up article published in Nature magazine on 12/12/2015 titled "Engineered bat virus stirs
debate over risky research, Lab-made coronavirus related to SARS can infect human cells" debates
"whether engineering lab variants of viruses with possible pandemic potential is worth the
risks." <https://www.nature.com/news/engineered-bat-virus-stirs-debate-over-risky-research-%201.18787>

During the inspection, it is hard to say if DASZAK will be forthcoming with information.

Thank you for coordinating!

It might be more beneficial for an inbound inspection in the event he is hand carrying biological samples. Below are recommended questions, [REDACTED] might have a few additional ones to add as well.

Why was DASZAK chosen to be on the WHO investigative team?
Where in China did he go?
Where did he stay while in China?
Who was the POC?
Did the team visit WIV? If so, what areas did they inspect? Who did the team meet with?
Did the team visit the Chinese Center for Disease Control and Prevention? If so, what areas did they inspect? Who did the team meet with?
Did the team meet with any other officials from the Chinese government?
Did he collect any biological samples during the trip?
Is DASZAK traveling with any biological samples?
Did he mail any samples back to the US?
Did he take any materials with him to China?
Has DASZAK maintained contact with anyone at the WIV? If so, whom and how often would he communicate?
What was the purpose of his travel on 01/04/2021-01/07/2021?

Subject: Peter Daszak Inspection

Good Morning,

Highlighted in the news, a 10 person team organized by the WHO is headed to China to research COVID 19 origins. A member of that team is Peter DASZAK who we have previously referred due to his connections to Zhengli SHI and WIV. DASZAK was responsible for funding WIV with NIH grant money for research. DASZAK has a tentative flight scheduled for departure tomorrow 01/12/2021 from JFK. DASZAK is an extremely high person of interest and should have a thorough inspection either outbound/inbound. There is also a possibility that DASZAK could hand carry and/or mail samples back from China. DASZAK has received criticism for his inclusion on the WHO team for possible conflict of interest due his ties to WIV.

"EcoHealth Alliance and Daszak have been working with Shi Zhengli, a virologist at the WIV, for more than 15 years. Since 2014, an NIH grant has funded EcoHealth's research in China, which involves collecting faeces and other samples from bats, and blood samples from people at risk of infection from bat-origin viruses. Scientific studies suggest that the SARS-CoV-2 coronavirus most likely originated in bats, and research on the topic could be crucial to identifying other viruses that might cause future pandemics. The WIV is a subrecipient on the grant."
