

WASTE REPORT for December 7, 2015

Racking Up Regulations at Home While Cutting Them Abroad

After years of complaints from across the country about the burdens of over-regulation, **the federal government is finally cracking down and taking a “guillotine” to the regulatory colossus—only in Armenia, and not in the United States.**

In a glaring display of contradiction, the U.S. Agency for International Development has backed approximately **\$400,000 in grants** to the Organization for Security and Co-operation in Europe **to reduce and streamline the regulatory burdens on businesses in Armenia.**¹

It should be noted, of course, that eliminating burdensome regulations is generally a good thing. In fact, the “guillotine,” as it is known, applies important criteria to regulations, such as whether a regulation is legal, necessary, and business friendly.² This is obviously criteria that our own federal government should be applying to regulations here at home. Unfortunately, the American taxpayer will have to wait to see their tax dollars support U.S. regulatory reform at home.

In fact, **while the federal government is funding a “regulatory guillotine” in foreign countries, the Obama administration is adding approximately 81 major regulations annually**, which is just slightly worse than the 62 added annually under President Bush.³

And what is a major regulation? Well, according to law, **it costs the economy at least \$100 million in economic activity, creates a major cost increase for consumers, or has an adverse effect on employment and the competitiveness of American businesses.**⁴ In total, it is estimated that **regulations cost the American economy \$1.88 trillion annually.**⁵ Aside from the cost to the economy, the Mercatus Center at George Mason University estimates that **the federal government itself spends almost \$50 billion creating and enforcing regulations.**⁶

One would justifiably assume that Armenia is suffering under a terrible regulatory climate if it requires intervention from our government. Armenia is trying to address about 25,000 laws and regulations hindering business. Project documents note this number is burdensome and that, **“[o]bviously, the creation of open competitive market[s] require simple and transparent rules for doing business.”**

How, then, does the U.S. stack up? **According to Regdata.org, the U.S. has over 1.04 million regulations,⁷ or over 40 times the number of crushing regulations as Armenia.**

**Maybe instead of funding this project,
the U.S. government should be applying for its help.**
